Company Registration Data Analysis

Turnover, sector, incorporation and geographic patterns

50,501 companies analysed after data-quality checks and removal of duplicate and aggregate Summary records.

ORIGINAL RECORDS

50,520

Before cleaning

FINAL RECORDS

50,501

Used for company-level analysis

BUSINESS QUESTIONS

4

Answered with Python analysis

ANALYTICAL APPROACH

1. **Data quality**

   Checked missing values and duplicates.

2. **Cleaning**

   Removed 9 duplicate rows and 10 Summary aggregate rows.

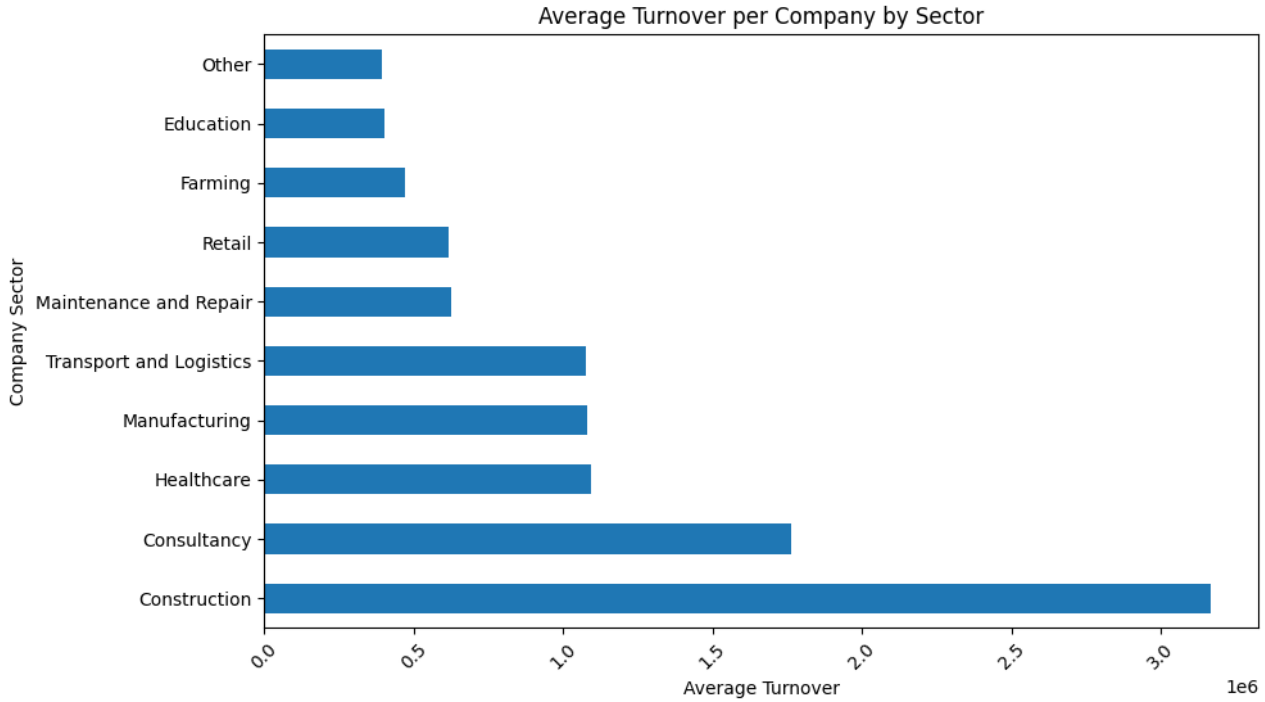

3. **Feature engineering**

   Average turnover, incorporation year/month and year-on-year growth.

4. **Business questions**

   Compared sector performance, incorporation patterns, turnover consistency and geography.

Q1 | Which sector has the highest average turnover per company, and how does this compare to the sector with the most companies registered?

HIGHEST AVERAGE TURNOVER

Construction — £3.17m

Average turnover per company

MOST COMPANIES

Other — 33,026

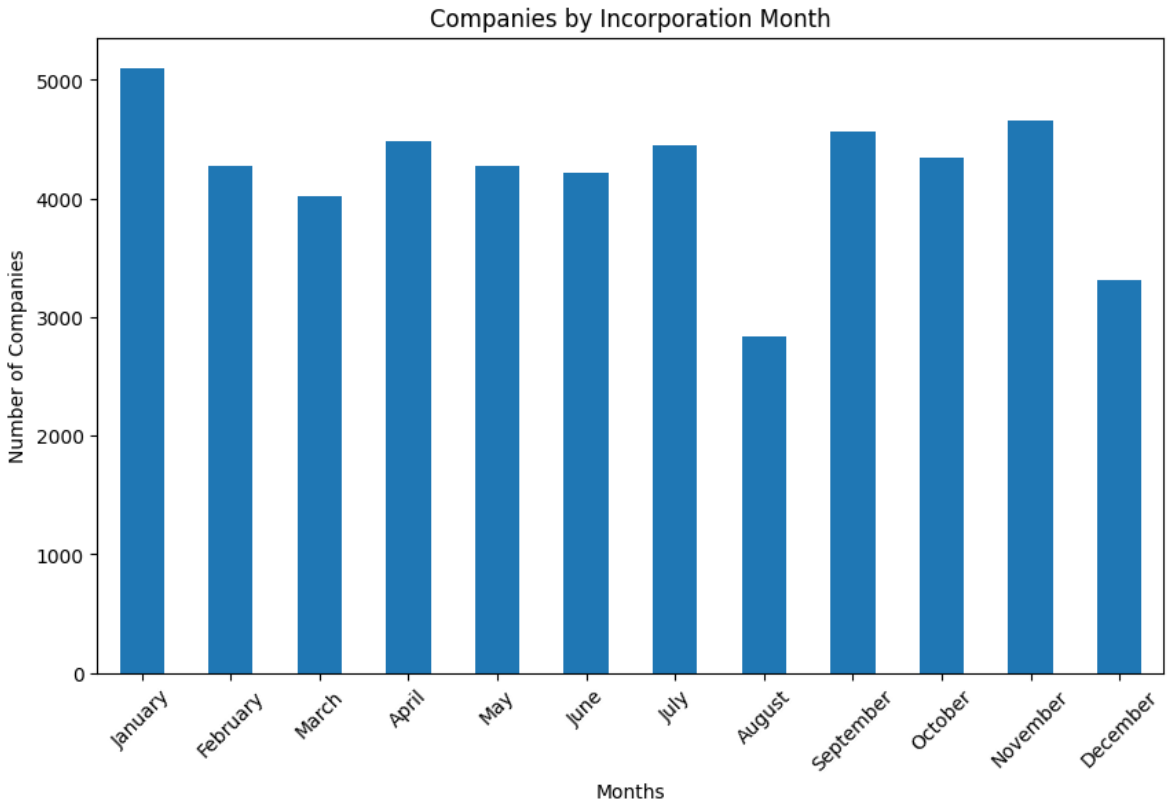

65.4% of the cleaned dataset

KEY COMPARISON

Not the same sector

High company volume does not imply highest average turnover

Q2 | What is the most common month for a business to incorporate, and is this consistent across different sectors?

January is the most common month overall, but the pattern is not uniform across sectors.

MOST COMMON MONTH

January

5,101 companies

SECTORS PEAKING IN JANUARY

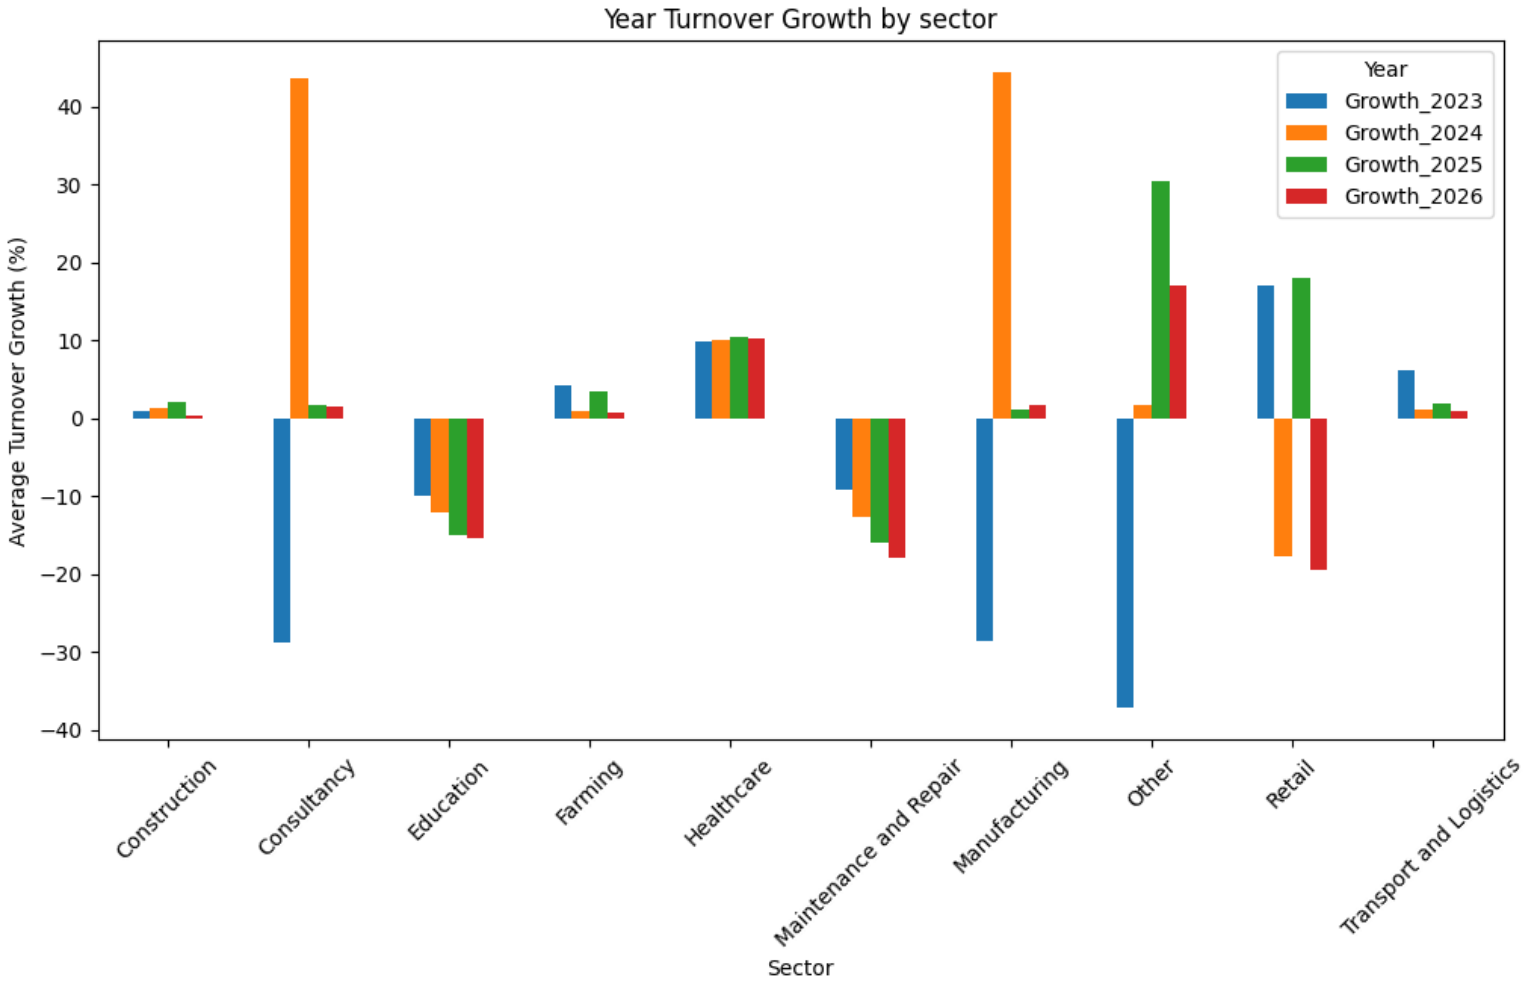

4 of 10

Consultancy, Education, Other and Retail

PEAK MONTH BY SECTOR

Sector	Peak month
Construction	November
Consultancy	January
Education	January
Farming	April
Healthcare	September
Maintenance & Repair	May
Manufacturing	April
Other	January
Retail	January
Transport & Logistics	November

Q3 | Which sector shows the most consistent change in turnover year-on-year across the full period, and what does this suggest about that sector's future performance?

MOST CONSISTENT

Healthcare

Growth stayed close to 10% in every year-on-year period.

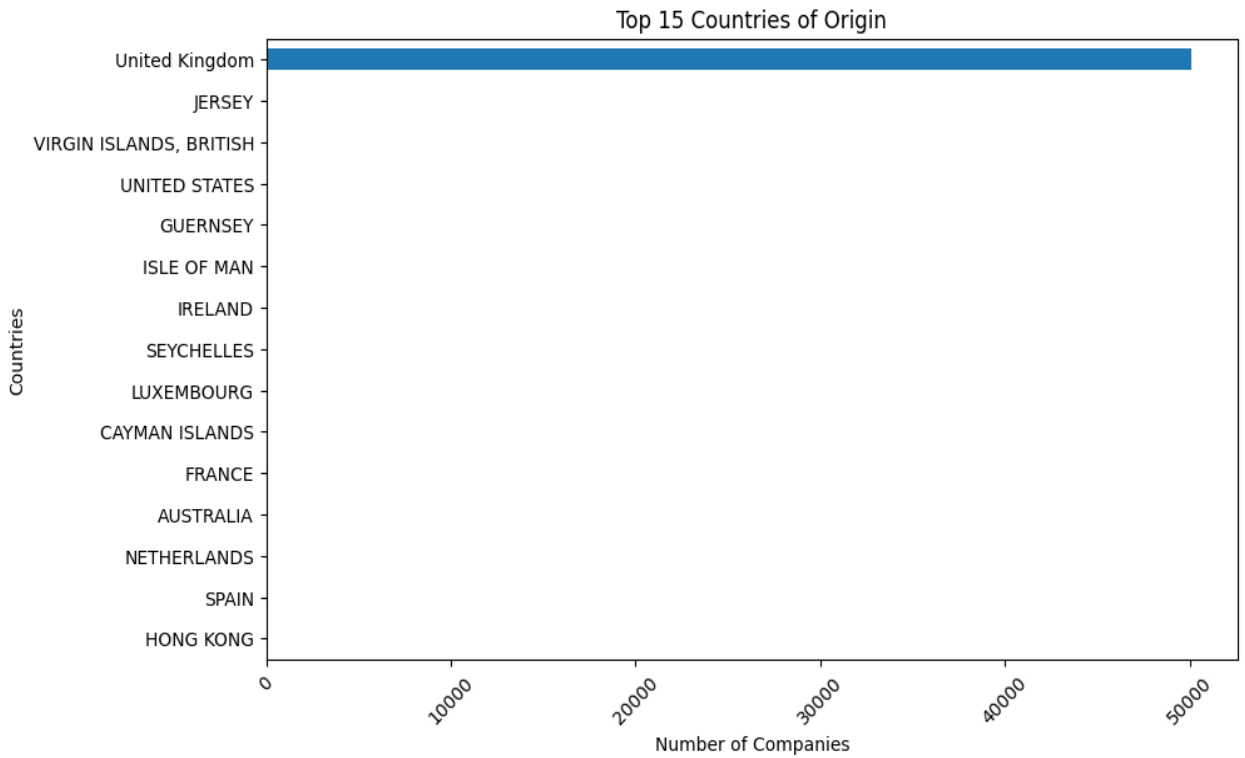

Period	Growth
2023	9.8%
2024	10.0%
2025	10.4%
2026	10.2%

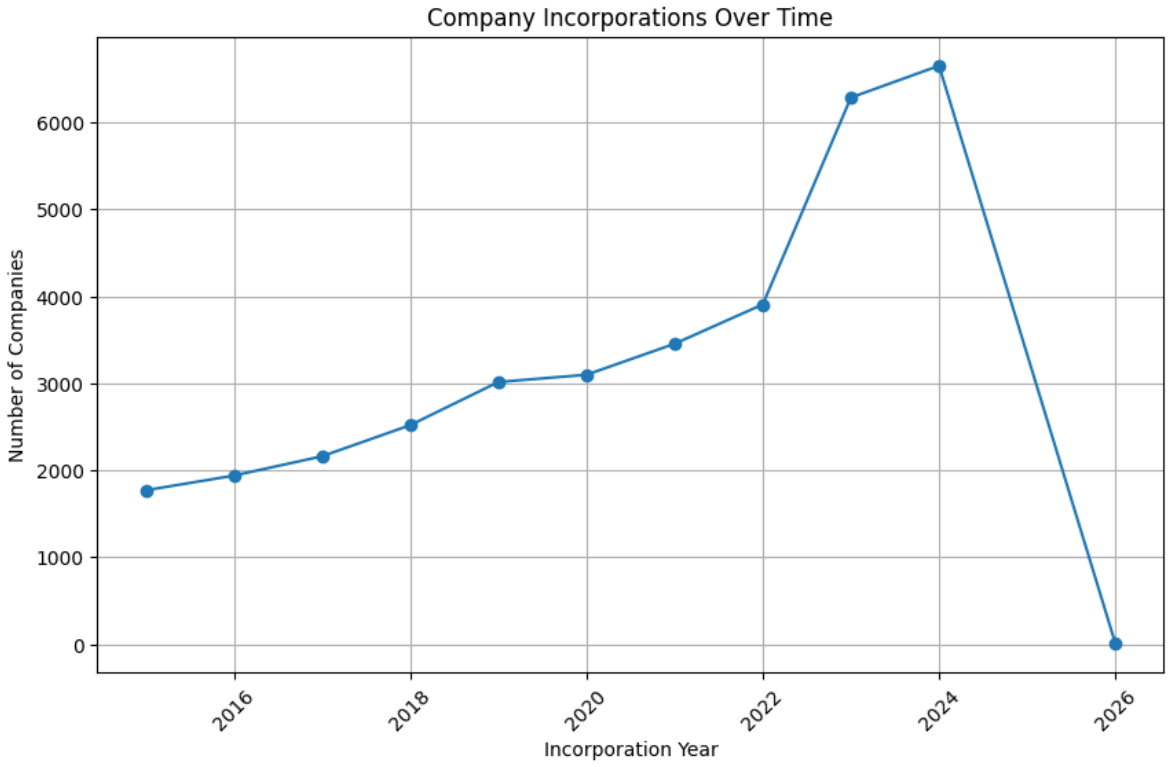

Growth variation

0.256 percentage points

This indicates historically predictable turnover growth, although it does not guarantee future performance.

Q4 | What other conclusions can be drawn from the data. We are particularly interested in trends over time, and comparisons between different geographic areas.

UK CONCENTRATION

50,093 companies

99.2% of the cleaned dataset

HIGHEST OBSERVED COUNTRY AVERAGE

Sweden — £1.84m

RECENT INCORPORATION TREND

3,456 → 6,653

2021 to 2024; 2026 has only 12 records
